

Diamond Squeegie Tires

Experienced motorists demand Diamonds in far greater volume than any other non-equipment tire.

Why?

Mileage built in to bouncy rubber, tough fabric and heavy, long wearing tread.

WELL KNOWN MINER DIES ON THE COAST

Fred Stull, long a resident of Chloride, but who has been in San Francisco hoping to receive benefit from the effects of a stroke of paralysis that rendered him almost helpless, died in that city last Sunday morning.

Mr. Stull was long identified with the mining industry here, a long time superintendent of the Payroll and it was while engaged in his duties at that mine that he suffered the stroke from which he never recovered.

He was one of Chloride's most prominent citizens and his active participation in its affairs ceased only when physical incapacity compelled such a course. With his passing Chloride lost one of its most esteemed citizens. Interment took place Thursday, in Kingman, the services being held under the auspices of the Elks lodge.

S. S. Jones and Jack Shank are shipping a 30-ton carload of dump ore from the old Towne mine. While the ore will no doubt prove profitable after paying all expenses, it is probably more with a view to learning something of the treatment methods needed than to a desire for profit.

F. V. Owens, president of the Arrowhead Trails Association, will address the Chloride Chamber of Commerce next Monday night. All members and non-members are requested to attend this meeting, as it will present an opportunity to hear from an expert the advantages that Chloride may expect from the establishment of the new Chloride-Searchlight automobile road, which will become a portion of the Arrowhead Trails.

The mill at the Washington-Arizona has been under the care of experts for several days to correct such shortcomings of defects as might appear. A short run was made Monday last and this proved the need of an elevator for returning the coarser product to the larger ball mill for re-grinding. Otherwise it seemed to work perfectly. This elevator was ordered immediately by telegraph.

Operations in the mine are going forward rather vigorously. Men have been put to work running a crosscut from the end of the tunnel, about 110 feet from the portal, to tap what is known as the Copper vein, which is said to be the most valuable vein on the estate, running high in copper, silver and lead. The crosscut will cut this vein at a depth of more than 600 feet.

CALUMET BAKING POWDER SAVES THREE WAYS

—A moderate priced Baking Powder of greatest merit. Honestly made. Honestly sold. Economical in every way. Every particle is full of actual leavening value. A full money's worth.

—You save time when you use it. Calumet is all baking powder. It begins to raise bakings the instant they are put into the oven. You don't have to keep "peeping" to see if bakings are all right. You know they are. Calumet is sure—never fails. That's economy. And true economy—in cost—in use—in time.

One trial will prove it and show you in results why millions of shrewd, thrifty housewives prefer Calumet to all other brands.

—The unfailing strength of Calumet guarantees perfect results. Not only saves flour—sugar—eggs, etc.—but saves Baking Powder. You use only a teaspoonful—you use two teaspoonfuls or more of most other brands.

Calumet contains only such ingredients as have been approved officially by the U. S. Food Authorities.

SUMMONS

IN THE SUPERIOR COURT OF MOHAVE COUNTY, STATE OF ARIZONA.

FAY ROEDER, Plaintiff.

VS. WALTER ROEDER, Defendant.

Action brought in the Superior Court of Mohave County, State of Arizona, and the complaint filed in the office of the Clerk of said Superior Court.

IN THE NAME OF THE STATE OF ARIZONA, To Walter Roeder, Defendant.

GREETING:

You are hereby summoned and required to appear in an action brought against you by the above named plaintiff in the Superior Court of Mohave County, State of Arizona, and answer the Complaint therein filed with the Clerk of this Court, at Kingman, in said County, within twenty days after the service upon you of this summons, if served in said County, or in all other cases within thirty days thereafter, the times above mentioned being exclusive of the day of service or judgment by default will be taken against you.

Given under my hand and seal of the Superior Court of the State of Arizona, in and for the County of Mohave, this 8th day of October, 1917.

(Seal) L. M. TEALE,
Clerk of the Superior Court of said Mohave County.
Walter Stingley, Attorney for Plaintiff.
Kingman, Arizona. 56-10-13-11 10:00p

NOTICE TO THE PUBLIC

Notice is hereby given that this company will not be responsible for any debts contracted by any of its employees, except on a written order signed by an officer of this company.

J. H. Smith, Sec'y.

LESS MEAT IF BACK AND KIDNEYS HURT

Take a glass of Salts to flush Kidneys if Bladder bothers you—Drink lots of water.

Eating meat regularly eventually produces kidney trouble in some form or other, says a well-known authority, because the uric acid in meat excites the kidneys, they become overworked, get sluggish, clog up and cause all sorts of distress, particularly backache and misery in the kidney region; rheumatic twinges, severe headaches, acid stomach, constipation, torpid liver, sleeplessness, bladder and urinary irritation.

The moment your back hurts or kidneys aren't acting right, or if bladder bothers you, get about four ounces of Jad Salts from any good pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to flush clogged kidneys and stimulate them to normal activity; also to neutralize the acids in the urine so it no longer irritates, thus ending bladder disorders.

Jad Salts cannot injure anyone; makes a delightful effervescent lithia-water drink which millions of men and women take now and then to keep the kidneys and urinary organs clean, thus avoiding serious kidney disease.

CHLORIDE NEWS

Special correspondence covering the Chloride District to the Mohave Daily Miner by the Chloride Herald, correspondent.

It's an ill-wind that doesn't blow good for someone, so the Mexican revolution which chased A. L. and J. D. Parker, brothers, out of our southern neighbor's territory may result in their attaining a fortune out of the famous White Hills mines, 30 miles north of here. Both brothers have resided for years in Mexico, but previous to drifting down there were successful leasers on the O'Malley ore-shoot, in the White Hills the one that produced more than a million dollars some years ago.

It was the policy of the owners in those days to let only 3-months' leases, so when the Parker brothers time was up they left with a good-sized stake. Others took up the work where they left off and in a short time extracted One Hundred Thousand dollars.

After returning across the international line the brothers made a bee-line for the scene of their former success, the White Hills camp, long closed down. Finding the owner, they persuaded him to grant them a lease for a year. This was six months ago.

A few days ago since they picked up the same rich ore in an incline shaft, about 400 feet below the surface and in a short time filled 35 sacks with rich ore.

The ore in eight of these sacks assay 3000 ounces in silver per ton, while the others will assay about 2000 ounces silver per ton. This is only the beginning and will give them a nice sum of money to push developments faster during the remainder of their lease. They have a 6-horsepower hoist and will probably realize a small fortune before their lease terminates.

In crosscutting the vein in the West drift, a few feet from the shaft on the 150-foot level of the New Mohawk, the same ore shoot that was found in the East drift was encountered, proving the length of this shoot to be not less than 75 feet, while further work may easily prove it to be much longer. The new find shows up strong and apparently continuous. The width at this point is not less than two feet and shows specks of ruby silver.

A 200-pound piece was carefully taken out for the New Mohawk's ore exhibit at the Northern Arizona Fair and will excite favorable comment.

Mr. and Mrs. F. A. Wright, who left here last March for the Pacific coast, expecting to be away only a short time, arrived in Chloride last Sunday evening after being away about 7 months, during which time they travelled over much of the United States.

Mr. Wright says that the East thinks, talks and acts nothing but war and oil, but he believes that it is only a question of a short time until mining will come in for its share of attention. The enormous profits derived from manufacturing plants of nearly all kinds and the unprecedented demand and high prices for oil and its products, have so distracted the attention of investors that mining is compelled to await its turn.

He will remain in camp for a few days attending to business relating to his mining properties in this district.

The Keystone mill is running about eight hours every day, during the tuning-up stage, but is treating about 35 tons of the lowest grade ore daily. General Manager Fred W. Sherman is highly pleased with the performance of his latest creation, which runs like a clock and is doing exceptionally satisfactory work in recovering values.

The water problem has also been solved at the Keystone, as the mill has demonstrated its ability to utilize less water than the mine is producing, as since it began operation the pump has not been able to perceptibly lower the water in the mine shaft. The result of this discovery will be the de-watering of the shaft and resumption of mine operations at an earlier date than originally planned.

The New Mohawk has purchased a 12-horsepower hoist for use on its No. 2 shaft. The small hoist now in use there will be moved to No. 3 shaft, which has reached a depth too great for windlassing.

The shaft on the Fredonia claim of the Union Metals Company has attained a depth of 102 feet, and a station is being cut, preparatory to crosscutting to the hanging wall to determine the width of the vein at that point.

The Company has just completed final payment to the former owners of this claim.

The Golconda Annex, owned by the same company, has cut the vein with the crosscut after driving it 71 feet. The footwall of the vein was penetrated and a good-looking shoot of lead ore found. The cut will be driven to the hanging wall, after which drifting will commence on the ore and a carload taken out for shipment. The drift will continue to a point under the rich ore found on the surface.
